

10Q A.I. Assessment

Why an A.I. Assessment?

Building and incorporating AI models into a business is an investment. But the output of models can be unpredictable. Too often we've seen people get half-way through the model build process, only to find out they don't have the tools to integrate, or the model can't quite perform as well as expected. We built our AI Assessment process to allow our customers to identify and plan around these issues prior to investing in AI.

Steps to an A.I. Assessment

Focus Groups and Interviews

Data Gathering and Matching

Testing for Signal

Complete A.I. Roadmap

What to Expect?

At the end of an A.I. Assessment, you will receive a presentation of the results, a detailed report with analytics and outcomes from the process, and an AI roadmap. This roadmap will identify models that can currently be created, which models require additional data collection, and strategies to ensure future data collection aligns with organizational goals around automation and artificial intelligence.
